Globally relevant?

Biography:

Dr. Marie Puybaraud
PhD, PGCert, BSc (Hons), MBIFM

Marie is Director Global WorkPlace Innovation for Johnson Controls Global WorkPlace Solutions. Marie manages the R&D programme in innovation in facilities management & real estate and workplace, leading around 15 annual projects to successful completion and disseminating all the findings both internally across the global business and externally through marketing and communications.

Marie has more than 15 years of track record as an active researcher in the field of the built environment, spanning over a career in academia leading a postgraduate course in facilities management and teaching in Europe, in Asia and developing a global network of partners she collaborates with on research projects.

She also continuously publishes articles in the press and specialist journals on her research projects, particularly in the field of workplace, mobile working and flexible working. A regular speaker at both national and international conferences, she combines her expertise and corporate experience to transfer knowledge to the audience.

Throughout the years working for Johnson Controls, she has played a significant role to develop stronger relationships with clients through the R&D activities, building their trust and engaging in innovation the clients and members of the GWi network. Knowledge Management and Innovation are core to her success and a continuous activity.
